

# EyeC Quality Link

**Link your press and  
rewinder** for maximum  
productivity

## Improve your quality **AND** productivity

Thanks to the EyeC Quality Link, monitor your quality where it benefits you most – on the press – and use the inspection results to speed up the removal of faulty material on the rewinder. As a result, you can **enjoy total quality control** without having to equip both your press and rewinder with full inspection systems. Not only do you prevent waste, cut production costs, and meet customer requirements, but, best of all, you also **improve your productivity**.

## Prevent waste and cut costs

Installed on your press, the EyeC ProofRunner **monitors 100% of the print run in real time**. The system identifies any defective item and alerts you so that you can fix the problem immediately. As a result, you can run at full machine speed without risk, and no longer produce unnecessary waste and overruns.

## Efficiently evaluate inspection results

The EyeC Quality Manager software enables you to use the data from the press to **evaluate the quality of each printed roll and avoid unnecessary stops at the rewinder**. Thanks to its intuitive interface, you can review deviations easily and accept minor defects in one click. Now independent from the finishing line, this evaluation can be performed by experts such as the ones from your QC department.

## Quickly remove faulty material

The EyeC Finishing Manager software **uses the released data to automatically stop your rewinder** when the operator needs to remove faulty materials. The reduction of the number of stops enables the operator to run faster and work more efficiently. You are certain to keep customers satisfied by delivering a flawless job!

# EyeC Quality Link

## 1 PRINT MONITORING

– On your press with the EyeC ProofRunner –

### Reduced production costs

- ✔ Maximum machine speed
- ✔ Corrective actions in real time
- ✔ Waste reduction
- ✔ No overruns

### Compliant job quality

- ✔ Full content verification
- ✔ Quality consistency

## 2 DEFECT EVALUATION

– On a work station with the EyeC Quality Manager –

### Quick evaluation

- ✔ Easy-to-use interface
- ✔ Evaluation of serial defects in one click

### Safe handling

- ✔ Evaluation separated from the finishing line
- ✔ Involvement of the QC department
- ✔ Acceptation of minor defects

## 3 DEFECT REMOVAL

– On your rewinder with the EyeC Finishing Manager –

### Improved productivity

- ✔ Maximum machine speed
- ✔ Automatic stop for defects
- ✔ No unnecessary stops

### Satisfied customers

- ✔ 100% compliant material
- ✔ Meet customers' requirements
